Introduction

LayOns is a web-based platform that aims to **simplify** the job search process for job seekers.

The platform will provide job seekers with an intuitive **search** feature, allowing them to search for jobs.

The project will be developed using **Angular and Node.js**, two powerful technologies that will provide a smooth and responsive user experience.

The goal of the project is to allow employers to **post job openings** and provide job seekers with a one-stop solution for their **job search** needs, making the process of finding a job faster, easier, and more efficient.

Scenario - 1 : Create Job Openings

Given I am logged in
When I am inside the "Create Jobs" page
Then I am presented with a form with the position, job description, email, employer name, pay range, location.
And I fill in the job description
And I enter the contact person email id
And I enter the employer name
And I enter the estimated pay range for the job
And I enter the location, remote/hybrid/name of the work location
And I click on "Post Job" button
Then I am taken to "Create Jobs" page
When I am in the "Search for Jobs" page
Then I am greeted with a textbox
And I enter the job's name which I have created before
When I click the button 'Search'
Then I can see the job posted

LayOns

Post an opening!

Enter the position you are looking for

Enter the Job description

Post

Scenario - 2 : Create Profile

Given I am at the home page
When I log in for the first time
Then I am presented with a form with name, email, location, qualification
And I fill in my name (first name, last name)
And I enter my email id
And I enter my location
And I am asked to upload my resume as a PDF file
When I click on "Submit" button
Then I am displayed a success message saying: "Profile created"

LayOns

Let's create your profile!

Enter your name

Enter your email ID

Enter your location

Enter your highest qualification

Upload your resume

Drag and Drop here!

Submit

Scenario - 3 : Search and Apply for a Job

Given I am logged in
And I am in the "Search for Jobs" page
Then I am greeted with a textbox
And I enter a job's name
When I click the button "Search"
Then I am given a list of jobs that match the search query
And all the job listings have a button "Apply"
**When** I click the button "Apply" of a job from that list
Then I am redirected to the job page of that particular job
And I can see job details such as job description, employer's email, employer's name, pay range, work location
When I click on "Apply" button to apply for that job
Then a message is displayed "Applied Successfully"
And I stay on the same page at the end
